

# Glass sphere solar power generation

## Overview

---

Could a glass sphere be the future for solar energy?

Luckily, there is a potential solution. Rawlemon, a solar energy company started by a German architect named Andre Broessel, has been working on a spherical solar energy generator that is potentially more efficient than a standard solar panel. Broessel believes this glass sphere could possibly be the future for solar energy.

Could this sphere power generator be the future of solar energy?

Crystal balls have been telling fortunes in fairgrounds for many years, but this Spherical Sun Power Generator could be the future of solar energy. A German Architect has designed an innovative form of a solar power generator. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere! [see-also].

How does a sphere solar power generator work?

The Spherical Solar Power Generator works by using a large transparent sphere to focus diffused sunlight onto a small surface area of mini-solar panels. Because the solar panels used on the device are so small, its relative efficiency is increased. It is, in effect, an innovative form of other concentrated photovoltaic technologies (CPVs).

What is a solar sphere?

The solar spheres we are talking about are called Rawlemon, a sphere-shaped lens that generates solar energy. It is 70% more efficient than conventional solar panels due to its system of concentration and amplification of solar rays. Its IndieGogo campaign was a success, raising \$217,000, almost double the amount needed to start manufacturing.
