

## EQACC SOLAR

# Global ranking of wind and solar complementary companies for solar container communication stations

## Overview

---

Which region has the largest solar-wind complementarity?

A study by Viviescas et al. determined that high wind speeds during nighttime make areas from the northeastern coast of Brazil exhibit the largest solar-wind complementarity, confirming the findings of this paper.

Can a solar-wind system meet future energy demands?

Accelerating energy transition towards renewables is central to net-zero emissions. However, building a global power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.

Does solar-wind complementarity exist in continental China?

In their assessment of solar-wind complementarity in continental China, and using the Pearson correlation coefficient, Ren et al. found similar results to ours regarding the spatial distribution of synergy between these two VRES on a daily scale.

Where is the complementarity of wind and solar resources in China?

It can be seen from the spatial distribution that wind and solar resource complementarity is relatively high in northwest, northeast, and central China, while the complementarity in the southwest and southern areas of China is relatively low.

## Global ranking of wind and solar complementary companies for solar

---

### Variation-based complementarity assessment between wind and solar

From this, the complementarity between wind and solar resources in China is assessed, and the trend and persistence are tested. Furthermore, the spatial compatibility ...
