Greek energy storage power station purchase cost standards

Overview

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

Should Greece invest in energy storage facilities?

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in PVs, as well as PHS facilities .

Is Greece preparing for a new energy storage auction?

Greece is gearing up for its second competitive auction for standalone, front-of-the-meter energy storage facilities connected to the electricity transmission network. The auction is part of Greece's 1 GW energy storage program.

Will res stations be regulated in Greece in 2021?

1 During 2020-2021, Greece has experienced a new explosion of licensing interest for RES stations. The application to the Regulator in mid-2021 exceeded 9000 MW, with most of them having already acquired Electricity Producer Attestation (EPA), far beyond the needs of our national system.
