High frequency inverter with peak power of 6000w

CE UN38.3 

Overview

What is a high efficiency power inverter?

High efficiency power inverters which use a modified sine wave to power 230V mains equipment from a 24V battery • Designed to work with most modern day lorries or marine power systems that run of a 24V alternator • Over 85% efficiency • Soft start minimise.

What is a high frequency inverter?

A high frequency inverter is a type of UPS (Uninterruptible Power Supply) that uses a microprocessor as its process control center. It employs software programming to control its operation, unlike traditional analog circuits.

Which Power Inverter should I use?

It is strongly recommended that users use inverters that do not exceed 85% of rated power. In this video, ATO makes a simple test on the input and output voltage of 1000W 24 DC to 220V AC pure sine wave power inverter. And, this power inverter is used to power a cell phone and a fan which work normally. An inverter is a power conversion device.

How many watts can a battery drive an inverter?

If a battery is 12V/50AH, we can obtain a battery output power - 600 watts via multiplying 12V by 50AH. If the inverter efficiency is 90%, then we multiply 90% by 600 watts to get 540 watts. This means that your battery can drive an inverter with an output power of up to 540 watts.
