High power power storage box

Overview

What is a high-voltage energy storage system?

A high-voltage energy storage system (ESS) offers a short-term alternative to grid power, enabling consumers to avoid expensive peak power charges or supplement inadequate grid power during high-demand periods. These systems address the increasing gap between energy availability and demand due to the expansion of wind and solar energy generation.

What is HBD® & MPMC hybrid power station?

HBD® is mainly developed for no emission and low noise, reducing the dependence on grid, improving power supply quality and ensuring the power consumption of emergency load. For Residential & Commercial Independent Power MPMC Hybrid Power Station is a reliable resilient / prime energy solution mainly developed for independent power.

What is a high-voltage ESS?

Most high-voltage ESS consist of multiple battery modules (BMUs) to manage and scale a system for site-specific requirements. Within a BMU, MPS's battery monitoring and protection devices can be used as a comprehensive analog front-end (AFE) to accurately measure up to 16 series Li-ion battery cells.

What is hybrid power station?

For green living while ensuring stable off-grid power source, Hybrid Power Station integrates diesel generator set (gas generator set for optional), solar power, battery storage and hybrid solar inverter in one secure unit. It helps customers realize solar self-consumption, rate arbitrage and more importantly, power independence.
