Overview

What is a BESS battery energy storage system?

A BESS (Battery Energy Storage System) battery system is very necessary in nowadays. It can supply electricity for daily use during power failures. The system can also store grid energy, especially renewable energy. The cost savings from this could be passed on to customers.

What safety systems are available for Bess batteries?

Safety systems are available to protect Battery Energy Storage Systems (BESS) from fire and explosion hazards. Nearly all BESSs are equipped with a battery management system (BMS), which ensures batteries operate within safe temperatures. Some of these systems shut off power if elevated temperatures are detected.

What types of batteries can be used in a Bess battery?

BESSs can accommodate different batteries, including lithium-ion, lead-acid, nickel-cadmium batteries, and others—we'll elaborate on them later in the article. Every battery type has certain technical specifications that designate BESS uses and affect the efficiency of battery energy storage.

What is a Bess system?

Customers rely on these systems to store excess energy produced during periods of low demand or when renewable energy sources, like solar and wind, are generating surplus power. Our grid-scale BESS solutions range from 1 MWh to over 1,000 MWh as both traditional LV and JST's unique HV cascade solution.
