

EQACC SOLAR

Honduras crystalline silicon solar glass

Overview

What is crystalline silicon photovoltaics?

Crystalline silicon photovoltaics is the most widely used photovoltaic technology. Crystalline silicon photovoltaics are modules built using crystalline silicon solar cells (c-Si). These have high efficiency, making crystalline silicon photovoltaics an interesting technology where space is at a premium.

What type of glass is used for solar panels?

Crystalline silicon solar cells are connected together and then laminated under toughened or heat strengthened, high transmittance glass to produce reliable, weather resistant photovoltaic modules. The glass type that can be used for this technology is a low iron float glass such as Pilkington Optiwhite™.

What are the different types of Photovoltaic Glass Technologies?

To meet specific requirements, we offer two advanced photovoltaic (PV) glass technologies: amorphous silicon and crystalline silicon, both fully customizable. Our glass can be customized to block the heat that enters the building and to provide the best insulation, thus avoiding the use of air conditioning and heating.

How much electricity is produced by silicon-based photovoltaic panels?

Silicon-based photovoltaic panels (PV) are already responsible for about 3% of electricity produced annually worldwide, and this share is expected to grow significantly in the following decades , .

Honduras crystalline silicon solar glass

Onyx Solar, Building Integrated Photovoltaics Solutions

At Onyx Solar, we understand that every project is unique. To meet specific requirements, we offer two advanced photovoltaic (PV) glass technologies: amorphous silicon ...
