How big is a solar panel on the roof

Overview

What is the most common solar panel size?

What is the most common solar panel size for homes?

For a residential solar panel, size is fairly consistent across manufacturers: 65 inches (1.65 meters) by 39 inches (1 meter) is the average solar panel size that you find on the roofs of houses. That is about 5.4 feet long and 3.25 feet wide, which equates to around 15 square feet.

How many solar panels can fit on a roof?

To determine how many solar panels can fit on your roof, you'll first need to know the size of a solar panel. There's no standardized chart for this, but as an example, a 5kW solar system consists of 50 100-watt solar panels.

What are the dimensions of standard solar panels?

Most solar panels are about 1.5 inches thick. The typical classification of solar panel sizes is based on the solar cell size, but it's not very useful for most calculations.

How much space does a rooftop solar system take up?

So a typical, residential rooftop solar system with 25 panels would take up about 375 square feet of roof space, but the size of your specific system will depend on your energy consumption. If you have high energy usage throughout the year, you'll likely end up with more panels, and vice versa.
