**How many years can the wind  
power supply of the base  
station be used**

## Overview

---

When did the wind energy program begin?

The wind energy program began on August 27-28, 2008, with a workshop in Washington, D.C., that focused on the manufacturing base needed to achieve 20% wind energy by 2030.

Can wind energy generate 20% of the nation's electricity demand?

According to a 2008 report published by the Energy Department, it is technically feasible for wind energy to generate up to 20% of the U.S.'s electricity demand by 2030.

How can we achieve 20% wind energy by 2030?

To reach 20% wind energy in the US by 2030, addressing transmission challenges such as siting and cost allocation of new transmission lines to access the Nation's best wind resources will be required. Read the complete report, "20% Wind Energy by 2030: Increasing Wind Energy's Contribution to U.S. Electricity Supply".

How long do wind turbines last?

On average, the expected service life of a wind turbine is approximately 25 years, but this doesn't mean that each component is meant to last for 25 years. There are several ways to extend the lifespan of wind turbines. High-quality materials and an aerodynamic design are important for maximising the energy capacity of turbines.
