# **How much does Türkiye s new solar modules cost**

## Overview

---

How much does a Turkish Solar System cost?

The Turkish authorities have set a 10-year feed-in tariff (FIT) of TRY 1.06 (\$0.0545)/kWh for PV systems that are installed between J, and Decem. Solar projects with Turkish PV components will be given an additional five-year tariff of TRY 0.2880/kWh.

How many solar panels are produced in Türkiye?

With solar PV installations exceeding 9 GW in less than 10 years, the PV panel production market has also expanded. There are more than 30 solar module manufacturers in Türkiye which have a total module production capacity of over 12 GW per year.

Does Turkey have a solar market?

Turkey has previously supported large-scale solar projects via a YEKA PV tender scheme and an incentive program for unlicensed PV plants under 1 MW. However, the Turkish PV market is currently being driven by self-consumption and net-metered rooftop PV.

How many people use solar energy in Turkey?

As a consequence of these flourishing developments, the Turkish solar energy sector currently employs over 50,000 people. The share of variable renewable energy sources, such as solar and wind, in total electricity generation is expected to increase. This is considering Türkiye's current flexibility opportunities, and renewable energy potential.
