How to set the battery cabinet temperature

Battery String-S224

- 1C Charge/Discharge
- Easy configuration and maintenance
- Power supply can be single battery string or parallel battery strings

Overview

What temperature should a battery be stored?

For best results, store batteries within the range of -20°C to 25°C (-4°F to 77°F) when not in use. Storing within this range helps maintain its capacity and reduces the self-discharge rate. Above 25°C (77°F): Accelerates the aging process. Below -20°C (-4°F): Can cause irreversible damage to the battery.

What temperature should a lithium battery be stored?

The ideal operating temperature range for lithium batteries is 15°C to 35°C (59°F to 95°F). For storage, it is best to keep them in a temperature range of -20°C to 25°C (-4°F to 77°F). Extreme temperatures can significantly affect performance, safety, and lifespan.

How to monitor the temperature of a battery?

It is particularly important to monitor the temperature for the efficient management of the batteries. Various temperature indication methods are proposed. Using the sensors (thermocouples, etc.) mounted on the battery surface or tab to measure the temperature is the most straightforward.

What temperature should a lithium battery be heated?

Lithium batteries perform best between 15°C and 35°C (59°F and 95°F). Within this range, they achieve peak performance and longevity. Below 15°C (59°F): Performance decreases due to slower chemical reactions. Above 35°C (95°F): Overheating can compromise battery health.
