Overview

What is the difference between indoor and outdoor substation?

A substation in which all electrical equipment are installed inside a building is called an indoor substation. A substation in which electrical equipment like transformer, circuit breakers, isolators, etc. are installed outside in an open environment is called an outdoor substation. Indoor substations have compact and complex design.

Why are indoor and outdoor substations not easily visible?

Equipment of an indoor substation are not easily visible because they are installed inside a building. Equipment of an outdoor substation are clearly visible as they are installed in open space. Indoor substations have a detailed document of the complete setup, hence, their fault handling is easier.

What is an example of an Indoor Substation?

A low voltage substation inside a factory is an example of indoor substation. An indoor substation is one in which the entire substation is built inside a building, whereas an outdoor substation is a substation in which the equipment are installed in an open environment.

What is an indoor base station?

Indoor base stations in rack format This is the most common type of base station, in which all its components are integrated in a rack-type cabinet, which provides more space for more modules or components. This can enable, for example, redundancy of all components, thereby improving system availability.

Base stations and networks

Base Stations Enable Mobile Communications
 Antennas Are Placed in Various Locations
 More Mobile Devices Means More Base Stations
 Base Station Output Power Is Low
 Exposure Limits Are Set by Independent Organizations
 Exposure Levels Are Much Lower Than The Limits
 Public Access Is Restricted Where Needed
 No Adverse Health Effects According to The WHO
 The antenna output power level is typically between 10 and 100 watts for an outdoor base station. Television transmitters, by comparison, usually have a thousand times higher output power than outdoor base stations. Antennas mounted indoors have about the same power as mobile phones.
