# **Huawei Tajikistan solar Glass Project**

## Overview

---

How much energy does Tajikistan generate?

The total installed generation capacity of Tajikistan is 6,058 MW (Figure 1) and HPPs account for 88 percent. The 3,000 MW Nurek HPP, with a seasonal reservoir, is the largest generating plant. It generates 50 percent of the total annual energy and is also the balancing plant in the system.

Will 200MW solar IPP be Tajikistan's First competitively procured PPP project?

Despite significant progress in planning and land acquisition, it is recognized that developing a 200MW solar IPP as Tajikistan's first competitively procured PPP project will be a challenging process for the following reasons:.

What is the power supply mix in Tajikistan?

Electricity supply mix is dominated by hydropower and, as of today, the countries' generation pool does not include any other renewable power at utility scale. The total installed generation capacity of Tajikistan is 6,058 MW (Figure 1) and HPPs account for 88 percent.

Which generating plant generates the most electricity in Uzbekistan?

The 3,000 MW Nurek HPP, with a seasonal reservoir, is the largest generating plant. It generates 50 percent of the total annual energy and is also the balancing plant in the system. Electricity exports increased from 1,350 GWh to almost 3,000 GWh in 2019 due to resumption of exports to Uzbekistan.
