Indonesia s wind power supporting energy storage policy

Overview

Does Indonesia have a wind energy potential?

This article aims to assess Indonesia's wind energy potential, evaluate challenges hindering wind power development (policy gaps, infrastructure issues, and economic constraints), examine government initiatives and policies at promoting wind energy, and identify strategies to optimise wind energy development in the country.

What will be included in Indonesia's wind energy development roadmap?

Finally, it is noteworthy that the subsequent deliverable under the project of which this roadmap is part (Wind Energy Development in Indonesia: Investment Plan), will include a more thoroughly assessment on the permitting procedure for onshore wind including barriers and recommendations.

Does Indonesia need more energy storage capacity?

(Hartatik) Jakarta—A report by the Institute for Essential Services Reform (IESR) highlights that policies that encourage the growth of ESS in Indonesia must support its development. The report, titled *Powering the Future*, estimates that Indonesia needs to have at least 60.2 GW of energy storage capacity by 2060 to support the energy transition.

How to accelerate energy storage deployment in the Indonesian power system?

To accelerate energy storage deployment in the Indonesian power system, key actions are needed to address existing opportunities and challenges, including: Tapping into the limited but existing opportunities for deploying energy storage systems (ESS) is vital for expanding their role in Indonesia's power sector.
