What are industrial inverters?

Industrial inverters are electrical power converters that change direct current (DC) to alternating current (AC). They are designed for industrial use to safeguard critical loads in places of high power shortage, such as high-rise buildings, offices, and industrial power plants. EnerTech delivers the finest industrial inverters that are efficient in saving energy bills even in the most extreme climatic conditions.

What is a commercial solar inverter?

The commercial inverter from KOSTAL supports a system voltage of up to 1100 volts DC. In this way, the solar inverter for the commercial sector ensures reliable and constant energy yields, meaning that the rated output of the company's solar system is quickly reached and the output power continues to be utilised perfectly.

How much power does a commercial inverter have?

Large residential inverters are in the 3,000 W to 6,000 W range, with single-phase power. Small commercial inverters Small commercial inverters are in the 13 kW to 15 kW range and can include three-phase power. Large commercial inverters Large commercial inverters are in the 60 kW to 100 kW range.

How many inverters do you need for a 2 MW system?

The 2 MW system requires 22 inverters – which have also been developed to deliver full power during icy winters or high temperatures on the roof in summer. Don't worry about your energy costs. Rather put your energy into solutions for your customers.
