Overview

What is a digital frequency inverter?

Flexible and digital frequency inverter for direct mounting on the motor or as a stand-alone converter with a power range of 0.37 to 4.0 kW Decentralized and versatile inverters with many functions, everything from simple speed control to operation of simple lift shafts and safety functions.

What is a frequency inverter with u/f control?

Frequency inverter with U/f control with all the necessary functions needed for speed control of asynchronous motors. This frequency converter with protection class IP66 is both easy to handle and has user-friendly functions for speed control of asynchronous motors.

What is a frequency converter?

Our frequency converters are adapted for industrial applications and control of drive lines in machines and systems and are designed for demanding working conditions, whether it concerns drives of pumps, fans, processing machines, conveyor belts, assembly lines or cranes and handling systems.

Why do you need a frequency inverter?

By adapt engine speed as needed, you can reduce speed when full power is not required, resulting in significant energy savings and reduced operating costs. By avoiding sudden starts and stops, there is a reduced load on equipment, which means that the frequency inverter contributes to extending the life of both motors and mechanical components
