Industrial-grade UPS uninterruptible power supply PDU

Overview

What is a PDU and how does it work?

A PDU (Power Distribution Unit) delivers AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices. The specific PDU you need depends on factors like output voltage, number of devices, outlet types, and mounting options.

What is a Cyberpower PDU?

A CyberPower Power Distribution Unit (PDU) is a device that distributes network power to multiple devices. PDUs deliver AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices.

What is the difference between a ups and a PDU?

A UPS provides battery backup and protects against power outages. A PDU distributes power from the UPS or main power feed to all the devices in the rack. Think of them as a team — UPS handles continuity; PDU handles distribution. When shopping for the best PDU for your server rack, it's important to understand your options.

What is an industrial UPS system?

The industrial UPS systems produced by SCU, a professional UPS supplier, are specially designed for industrial application with high performance, high efficiency and high protection level. The industrial UPS system provides uninterrupted high-quality industrial uninterruptible power supply for modern manufacturing.
