Install outdoor signal base station

Overview

How should a base station antenna be installed?

The hardware installation guidelines are limited but important for reliable base station performance. The base station antenna should be installed in open sky conditions, away from external influences that hinder the direct line of sight between the antenna and the GNSS satellites.

How do I set up a base station?

Set up the base station using either the tripod or T-bar mounting method. You must use an external radio antenna kit for the internal 450 MHz or 900 MHz radio. To avoid interference between the 900 MHz radio and GPRS transmissions, do not mount the external radio antenna within 1 m (3.3 ft) of the GSM antenna.

Where should an antenna be installed?

In general, this means that the ideal antenna installation is near the centre of the work area. For larger work areas (several 10's of km's), it is advised to place several base stations for optimal performance and easy selection of the nearest base station.

Can I install a base station CB system in my home?

Yes, but with limitations. Consider indoor antennas, magnetic balcony mounts, or window feedthrough antennas. Always check lease agreements and be respectful of neighbors regarding interference. Setting up a base station CB system opens a world of communication possibilities far beyond what mobile installations offer.

Install outdoor signal base station

Gateway and Base Station Installation Guide

Installation Planning IMPORTANT: This document provides guidelines for the proper placement and installation of Gateways, Base Stations, and the antennas. Failure to ...

How to set up a base station - Chapter 3: ...
