Overview

Where are DC home EV charging piles installed?

DC home EV charging piles generally use 380V three-phase electricity, so they are installed in highway service areas, high-end commercial areas, public parking lots, and collective terminal locations such as buses and logistics vehicles, mainly centralized charging stations. We can choose wall-mounted or column-mounted.

What kind of electricity does a charging pile use?

AC charging piles mostly use 220V single-phase electricity, which has the lowest requirements for power access and is more suitable for home use. They are mostly installed in community parking lots, and some public parking lots will also be installed, and are used in conjunction with DC fast charging piles. DC home EV charging piles.

What is an AC charging pile?

AC charging piles, commonly known as “slow charging”. AC charging piles only provide power output and do not directly charge the battery. You need to connect an on-board charger to convert AC power into DC power to charge the on-board battery.

How to choose the right power for a household charging pile?

Determine charging needs and select appropriate power Generally speaking, there are many choices for the power of household charging piles. The most common ones are 7kW, 11kW, and 21kW, which correspond to different voltage levels, such as 220V and 380V.
