Is it okay to climb up to the roof to see the solar panels

Overview

It is not recommended to walk on top of solar panels on a roof. Solar panels are designed to be lightweight and durable, but they are not designed to support the weight of a person. Should you install solar panels on your roof?

Installing solar panels on your roof isn't just about securing them in place—it's also about getting them up there without breaking your back (or the panels). If you're planning to DIY your solar project, make sure you consider this part of the process.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

Can you walk on top of solar panels?

While solar panels can withstand a lot of weight and you can walk on top of them, this is never recommended. Many variables could cause damage to the modules at your PV system, and the risk is never worth it.

Is walking on top of a solar panel dangerous?

Two things can make walking on top or around a solar panel installation dangerous: Risk of electric shock and electrocution. Damaging the PV module. While just walking on top of a PV module will not get you electrocuted, bad wiring around a PV installation or at the back of the modules still represents a DC Danger Zone during daylight hours.
