

## **EQACC SOLAR**

**Is the outdoor AP base station  
easy to use**

## Overview

---

Which Ubiquiti access point is best for outdoor use?

The Unifi Mesh access point is at the moment the most popular access point from Ubiquiti to use outdoors. It comes with two adjustable Omni antennas that can be angled 45 degrees to cover the area beneath the access point better. The antennas are removable, allowing you to replace them with spot-beam antennae for example.

Should I buy an outdoor access point?

With an outdoor access point, you can easily extend your wireless network outside. I really recommend not to buy access points that only cost \$20 or \$30. The specifications of those devices may look good, but most of the time they can deliver the performance they say.

What is the difference between indoor and outdoor access points?

Outdoor access points are built to withstand harsh weather conditions and have higher IP ratings for water and dust resistance, whereas indoor access points are not designed for such conditions. Do I need an outdoor access point if I only want coverage for a backyard?

.

How do I choose the best outdoor access point?

When choosing the best outdoor access point, consider factors like range, speed, weatherproofing, and compatibility with your existing network. Ultimately, the best choice will depend on your specific needs and budget, but our top picks provide a solid starting point for anyone looking to boost their outdoor connectivity.
