

## EQACC SOLAR

**Is the solar container lithium battery pack charged in series**

## Overview

---

Lithium battery packs are designed to be used in series, and it's a common practice in many applications. How to connect lithium solar batteries in series?

**Connecting Lithium Solar Batteries in Series:** To connect lithium solar batteries in series, you simply link the negative pole of one battery to the positive pole of the next battery. This ensures that the same current flows through all the batteries. The total voltage of the series connection is the sum of the individual voltages.

Should you connect lithium solar batteries in series or parallel?

In a parallel connection, the capacity increases while maintaining the same voltage, ideal for longer run times. When setting up lithium solar batteries, understanding how to connect them in series or parallel is crucial for maximizing efficiency and performance. Below, we delve into the specifics of each configuration.

What is the purpose of connecting lithium solar batteries in series?

The main purpose of connecting lithium solar batteries in series is to increase the output voltage. By adding up the voltages of the individual batteries, you can power devices that require higher voltage amounts. For example, connecting two 24V 100Ah batteries in series will result in a combined voltage of 48V while maintaining the same capacity.

Can lithium batteries be arranged in series?

Lithium can be arranged in series but it requires to be used with PCM (Protection Circuit Module) or BMS (Battery Management System). However, sealed lead acid batteries have been the batteries of choice for high-voltage battery systems for years and for long strings of battery application.
