Japan Osaka Dang Energy Storage Project

Overview

What is Japan's first energy storage project?

In 2015, we started Japan's first demonstration project covering energy storage connected to the power grid in the Koshikishima, Satsumasendai City, Kagoshima. This project is still operating in a stable manner today. One feature of our grid energy storage system is that it utilizes reused batteries from EVs.

Why is Sumitomo launching a large-scale energy storage platform?

One of the main reasons is the insufficient capacity of transmission lines. In response to this issue, Sumitomo Corporation aims to expand its business of storing energy nationwide in Japan by developing a large-scale energy storage platform that can compensate for this lack of transmission line capacity.

What are the challenges in promoting decarbonization in Japan?

The main challenge in promoting decarbonization is the transition to renewable energy, and its importance is indisputable. However, the introduction rate of renewable energy in Japan is still low compared to European and other countries. One of the main reasons is the insufficient capacity of transmission lines.

How will energy storage contribute to decarbonization in 2024?

In 2024, we plan to invest our accumulated know-how into the operation of the first large-scale energy storage plant in Japan, to be located in Chitose, Hokkaido. Our grid energy storage business contributes to decarbonization from two major perspectives. First is the nationwide rollout of an energy storage platform.
