# Kosovo s negative electricity prices demand energy storage

## SMART GRID & HOME

## Overview

---

Are energy shocks affecting households in Kosovo?

In Kosovo, a distributional impact assessment of energy shocks was done, and a review of the proposed vulnerable consumer program, supported under the DPL. The relatively high spending on energy made households in the region particularly vulnerable to tariff increases.

Why did Kosovo increase its energy consumption in 2020?

Kosovo reached a 24.4 per cent share of energy from renewable sources in gross final energy consumption in 2020, slightly below its target of 25 per cent. The increase in renewables was mainly due to the revision of biomass consumption data rather than a real increase in investments.

Does Kosovo have a hydropower strategy?

In March 2023 Kosovo became the first Western Balkan country to adopt an Energy Strategy that no longer promotes hydropower, due to its serious environmental impacts.

How much energy is lost in Kosovo in 2023?

According to Kosovo's Energy Regulatory Office, in 2023 transmission losses were at an acceptable level of around 1.21 per cent, but Kosovo has a serious issue with distribution losses, which amounted to 20.7 per cent. Over half of these are technical losses and the remainder are commercial losses (electricity that is not paid for).
