

# **Kyrgyzstan aids in building wind power stations for telesolar container communication stations**

## Overview

---

Where does power come from in Kyrgyzstan?

In Kyrgyzstan's predominantly mountainous terrain, winds of constant direction and strength sufficient for power generation can only be found in remote and sparsely populated areas.

Why does Kyrgyzstan use a lot of electricity?

After Kyrgyzstan gained its independence, residential power consumption rose significantly due to intensive use of electricity for heating and cooking.

How can I export data from Kyrgyzstan?

Data will be available through the .Stat Data Explorer, which also allows users to export data in Excel and CSV formats. Kyrgyzstan has considerable untapped renewable energy potential. Existing renewable energy consists of large HPPs, which account for 30% of total energy supply, but only 10% of hydropower potential has been developed.

Can non-recyclable waste be converted into electricity and heat in Kyrgyzstan?

Municipalities of large cities have been considering building plants for converting non-recyclable waste materials into electricity and heat, but no plans have yet been fully developed or implemented. Both energy supply and demand offer many opportunities for efficiency improvements in Kyrgyzstan.
