

## EQACC SOLAR

# Lightweight solar module battery string

## Overview

---

Are lightweight PV modules a viable solution for photovoltaic applications?

The expanding scale of the photovoltaic (PV) market has intensified the focus on PV module designs for diverse applications. Research actively pursues lightweight PV modules, replacing front glass with polymer films as a suitable design solution.

How many strings can a shingled PV module produce?

The 41 separated cells were joined in series in a shingle design to produce six strings using the ECA and a string array was fabricated by connecting them in two series and three parallels. Fig. 4 (c) illustrates the I-V curves of the lightweight shingled PV module.

How to fabricate a lightweight PV module?

For the fabrication of a lightweight PV module, we laminated a front sheet/EVA/solar cell array/EVA/FRP/EVA/Al honeycomb core/EVA/FRP structures using a simple one-step lamination process with lamination system (BSL2222OC, Boostsolar) at 140 °C for 660 s.

How reliable is a shingled-design lightweight PV module?

The shingled-design lightweight PV modules had an area of 1.034 m<sup>2</sup>, with only a weight of 6.2 kg/m<sup>2</sup>. Standard reliability was assessed through DH1000, TC200, PID, and ML2400 tests. The expanding scale of the photovoltaic (PV) market has intensified the focus on PV module designs for diverse applications.
