# **Lithium and Sodium Energy Storage Stations**

## Overview

---

What is the first large-scale sodium-ion battery energy storage station in China?

In May 2024, Southern Grid commissioned a 10 MWh sodium-ion battery energy storage station in Nanning, Guangxi province, the first large-scale sodium-ion battery energy storage station in China. The energy storage station can store 100,000 kWh of electricity on a single charge, which can meet the needs of around 12,000 households for a day.

Where will lithium-sodium hybrid systems be deployed in China?

As standardization frameworks develop, lithium-sodium hybrid systems could see broader deployment across China's renewable-rich regions such as Tibet, Xinjiang, and Gansu. Grid-forming storage is projected to account for up to 40% of China's new energy storage market by 2030.

Are lithium-ion batteries suitable for stationary energy storage?

Lithium-ion batteries (LIBs) are popular energy storage system due to their high energy density. However, the uneven distribution of lithium resource and increasing manufacturing cost restrain the development of LIBs for a large-scale stationary energy storage application , , .

Does a hybrid lithium-sodium storage system save money?

CSG estimates that the hybrid lithium-sodium model reduces system costs by around 30% compared with sodium-only storage, offering a more balanced trade-off between efficiency and economics.

## Lithium and Sodium Energy Storage Stations

---

### China Launches Lithium-Sodium Hybrid Energy Storage

CSG has launched China's first large-scale lithium-sodium hybrid energy storage station in Wenshan Zhuang and Miao Autonomous Prefecture.
