

## EQACC SOLAR

# Main specifications and dimensions of solar glass

## Overview

---

What G-value should a Photovoltaic Glass have?

Photovoltaic glass can be customized to achieve a solar factor between 6% and 41%. A low g-value is desirable to prevent overheating, especially in warm climates, as it prevents the interior temperature from rising too high due to the greenhouse effect.

What sizes are available for solar panels?

Standard panel dimension 1200mm x 600mm x 7.1mm, but available in any bespoke shape and size up to 3m. Full range of colour laminates or coatings available on request. Efficiency from 12% or 118Wp/m<sup>2</sup>. To buy or for help specifying please call 01223 911534 or email [info@polysolar.co.uk](mailto:info@polysolar.co.uk).

How much iron is in solar glass?

As one of the most crucial components of solar installations, photovoltaic glass demands high transparency. Therefore, strict requirements are imposed on the iron content in the silicon raw materials used for producing solar glass, with Fe<sub>2</sub>O<sub>3</sub> content typically ranging from 140 to 150 ppm.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

## Main specifications and dimensions of solar glass

---

### Solar Panel Glass Specifications Explained

That said, lets go over the details of solar panel glass specifications, exploring the types, properties, and configurations that ...
