

# Malawi Power's energy storage project

## Overview

---

The BESS Project, funded by the Global Energy Alliance for People and Planet (Geapp), aims to enhance electricity reliability and access by adding 20MW to the national electricity grid. What is the energy sector support project for Malawi?

The Energy Sector Support Project for Malawi is a USD 84.7 million loan agreement approved by the World Bank in 2011. It aims to increase the reliability and quality of electricity supply in the major load centres.

What are some solar energy developments in Malawi?

In Malawi, solar energy developments are helping local communities maintain sustainable energy. For instance, Bwengu Projects Malawi provides teachers in high-needs schools with solar-powered LED projectors in Bwengu, the northern countryside of Malawi.

How does Malawi use its energy?

Malawi gets over its total energy from oil, which is fossil fuel. We depend on this fuel to run our vehicles, generators, power industry and manufacturing, and provide us with electricity in the absence of hydro power. Petrol and diesel powers many of our municipal transportation fleets and the trucks that deliver goods to markets.

How can Malawi achieve a cleaner energy future?

The project will also contribute to a cleaner energy future for Malawi, reducing reliance on costly diesel generators, cutting carbon emissions by ~10,000 tonnes annually, and unlocking the full uptake of at least 100 MW of variable renewable energy, such as solar and wind power, into the grid.
