Does an uninterruptible power supply represent a significant capital investment?

Because an uninterruptible power supply (UPS) can represent a significant capital investment, it is important to have a general idea of how many years that investment will last.

How long do UPS batteries last?

In this way, the UPS batteries prevent dirty power from reaching sensitive electronic equipment — which is especially important in rural areas and other environments where the power supply is often unstable. Most UPS batteries have a life expectancy of three to five years when operating under ambient conditions — 68 to 77 degrees Fahrenheit.

How long does an ups last?

Routine maintenance is the best way to extend your system's lifespan. With proper servicing, a UPS can last for more than a decade. Routine preventive maintenance contributes to a UPS system's reliability, enabling technicians to detect potential points of failure before they become expensive problems.

How long do ups capacitors last?

Capacitors typically require replacement every five to eight years. However, some can last up to a decade, while those operating under unfavorable circumstances can fail faster. Rather than waiting until UPS capacitors reach the end of their rated service life, it is important to request replacement quotes when capacitors approach five years.
