Market price of 80kWh mobile energy storage container used by energy companies

Overview

In 2025, average turnkey container prices range around USD 200 to USD 400 per kWh depending on capacity, components, and location of deployment. Does mobile energy storage reduce energy costs?

Other factors such as the aging electricity grid infrastructure and the rise in use of smart grid services are contributing to the overall growth of the global mobile energy storage market. However, lack of awareness about the utility of mobile energy storage systems in the reduction of energy costs is acting as one of the major market restraints.

What is mobile energy storage?

Mobile energy is based on mobile distributed generation technology. Energy can be stored, controlled, communicated, and hence is mobile. In addition, the further miniaturization and decentralization of power generation distribution, along with all-weather, high-efficiency supply is proliferating the growth of the mobile energy storage market.

How many GW of storage will China have in 2025?

Investment tax credits under the U.S. Inflation Reduction Act (IRA) unlocked 11.9 GW of storage additions in 2024 and a pipeline of 18.2 GW for 2025. Similar momentum stems from the EU Renewable Energy Directive III, which mandates higher renewables penetration, and China's long-duration storage targets that foster flow-battery innovation.
