

EQACC SOLAR

Mauritania grid-side energy storage electricity price adjustment

Overview

Does Mauritania need a grid?

Mauritania is mostly dependent on non-renewable resources (fossil fuels) and the access rate to the grid is pretty low. Some projects are emerging to benefit from solar, wind and biomass resources and to increase the access rate to the grid.

What is the electricity sector like in Mauritania?

The electricity sector in Mauritania is characterised by a fragmented electricity network, low electricity access rates, and an imbalance between supply and demand.

How is Mauritania affecting the energy supply?

Currently, the population growth is around 2,6% per year. All these transformations in Mauritania are affecting the energy consumption necessitating an evolution in the energy supply. Mauritania is mostly dependent on non-renewable resources (fossil fuels) and the access rate to the grid is pretty low.

How will Mauritania's wind power plant affect its energy mix?

The wind power plant in the northern town of Boulenouar will also significantly increase the share of the country's energy mix. The significant share of renewable energy in Mauritania's total energy portfolio is impressive, especially compared to other countries on the continent.
