## Overview

---

Does Moldova have a power grid?

Moldova's electricity grid was predominantly built in the time of the Soviet Union, making it relatively old and inefficient. It is synchronously interconnected with Ukraine's Integrated Power System (IPS) and, in turn, Russia's Unified Power System (UPS) in the northern and south-eastern parts of the grid.

Does Moldova have a synchronous electricity system?

While there are transmission lines connecting Moldova's electricity to Romania, the grid cannot operate synchronously with Romania's electricity system, which is part of ENTSO-E's Continental Europe Synchronous Area and has stricter regulations for the technical operation of its network.

Can Moldova connect asynchronously with Romania?

Prior to the synchronous interconnection with Continental Europe, Moldova aims to connect asynchronously with Romania via High-Voltage Direct Current (HVDC) back-to-back converters, with a memorandum of understanding (MoU) concluded between the two countries in 2015 on five key projects for interconnecting both their electricity and gas systems.

Who develops high voltage inverter systems for electric vehicles?

The vehicle manufactures and automotive tier 1 suppliers develop inverter systems for electric vehicles. Discussions were held with their design and research teams during direct meetings to understand future developments. Through these discussions, along with our own research, there are some clear high voltage inverter trends in the EV market. 3.
