# **Nassau Generator BESS Wind Power Station**

## Overview

---

Will a new 14 MW wind farm be a Bess?

The new 14 MW wind farm was seeking a BESS to bring predictability to its power generation and achieve annual energy production of 40 GWh. It selected Nidec Conversion, which has more than 500 MWh of energy storage in operation, to provide the system.

Is Bess sizing a good strategy for high wind penetrated power systems?

However, the high investment cost of BESS makes its optimal allocation a critical issue. To address this issue, this article proposes an optimal sizing and siting strategy of BESS in high wind penetrated power systems considering the coordinated frequency and voltage control.

How to smooth wind power output with Bess?

Another technique widely used to smooth wind power output with BESS is the scheme method to charge and discharge BESS. This technique requires frequent switching between BESS charging and discharging.

How to control a Bess battery?

1. Avoid overloading or under loading of the battery 2. Maximum charging/discharging rated capacity of the battery 3. Keep the output between 0 and the rated value of the wind power 4. Control the degree of smoothing 2. 4. 2. Available charge/discharge power of BESS 1.  $S_{min} \leq x_2(k) / C_B \leq S_{max}$  2.  $P_C \leq u(k) \leq P_D$  1. Maximum control signal
