New Energy Charging Base Station

Overview

Where is China's first EV charging & battery-swapping demonstration zone?

China's first smart electric vehicle (EV) charging and battery-swapping demonstration zone was completed in East China's Jiangsu province. The zone covers nearly 500 square kilometers across the cities of Suzhou, Wuxi and Changzhou. With about 1,300 charging piles, it serves over 500,000 new energy vehicle (NEV) drivers.

How does the new EV charging zone work?

Previously, EV drivers often had to search for nearby charging stations. The new zone uses intelligent algorithms to help drivers find the fastest and most economical charging solutions, including suitable times and locations of charging facilities.

How can China promote the development of Nev charging stations?

China has successively formulated and issued many measures for this short board, providing firm system guarantees and funding support to promote the development of NEV charging stations. Technical innovation for NEV charging stations is an important way to drive the development of this field [8, 9].

How big is China's EV charging zone?

The zone covers nearly 500 square km in the cities of Suzhou, Wuxi and Changzhou. With about 1,300 charging piles, it is expected to serve over 500,000 new energy vehicle (NEV) drivers, according to State Grid Jiangsu Electric Power Co., Ltd.
