# **New energy storage esg**

## Overview

---

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

What is the future of energy storage systems?

Advancing renewable energy with energy storage systems Global demand for energy storage systems is expected to grow by more than 20 percent annually until 2030 due to the need for flexibility in the energy market and increasing energy independence.

How can McKinsey help you transition to energy storage?

McKinsey's Energy Storage Team can guide you through this transition with expertise and proprietary tools that span the full value chain of BESS (battery energy storage systems), LDES (long-duration energy storage), and TES (thermal energy storage).

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).
