

New energy storage installation in Austria

Overview

What is energy storage at a co-location facility?

As co-location facilities or so-called 'energy storage at the same location', batteries can store unused electricity generated by wind turbines or PV systems affected by peak shaving for later consumption or sale. This also applies to the new flexible, limited or restricted forms of grid access.

Why do we need electricity storage systems in decarbonised electricity markets?

In decarbonised electricity markets, electricity storage systems provide the flexibility urgently needed for grid operation and enhance the utilisation of volatile electricity generation from renewable sources.

What is energy storage & why is it important?

A significant innovation is the inclusion of energy storage in the functions an electricity undertaking performs. This means that storage facilities, and therefore also batteries, are to be treated either as consumers or suppliers to the grid and are subject to the corresponding rights and obligations.

New energy storage installation in Austria

1MWh Energy Storage System in Austria

We are thrilled to announce the launch of our 1MWh energy storage system in Austria. This project, now live, uses 192 Hicorenergy batteries paired with Victron inverters to create a ...
