Why was solar adoption a 'perfect storm' in Pakistan?

Solar adoption in Pakistan resulted from a “perfect storm” of supply and demand. On the demand side, an unprecedented hike in electricity tariffs — up 155% in just three years — rendered grid power unaffordable for many people and businesses. Industrial and residential users faced sharp price increases as subsidies were withdrawn.

How will solar power affect rural Pakistan?

Estimates by experts suggest that half of the tube wells will switch to solar power, adding 5.6 GW to 7.5 GW of distributed PV capacity — equivalent to 1 million U.S. residential rooftop solar systems. This shift has not only restructured energy in rural Pakistan but also reduced dependence on costly imported diesel.
