

**EQACC SOLAR**

# **New solar glass project**

## Overview

---

Can recycled solar panels be used to make new solar glass?

The facility would use recycled materials from retired solar panels to produce new solar glass, a “first-of-its-kind” according to the company at the time. Production is expected to begin in 2026, with an annual nameplate capacity of between 5GW and 6GW. The project represents a US\$344 million investment.

When will solar glass production start?

Production is expected to begin in 2026, with an annual nameplate capacity of between 5GW and 6GW. The project represents a US\$344 million investment. More recently the company signed a supply deal with US chemical producer Genesis Alkali to support the production of solar glass for its Georgia facility.

Why are solar glass suppliers investing in new production capacity?

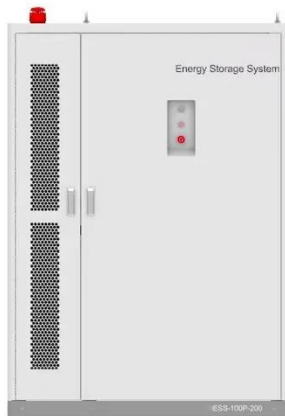

As PV module capacity increases, glass suppliers are investing in new solar glass production capacity. New facilities are popping up in North America, with unique features to ensure competitiveness, such as using recycled material.

Why is Canadian premium sand launching a solar panel glass project?

Besides influencing First Solar and its growing glass supply chain, policies such as the US Inflation Reduction Act (IRA) are also spurring crystalline silicon manufacturing investment. This has triggered Canadian Premium Sand (CPS), a new entrant from Canada, to announce a solar panel glass project.
