Are battery energy storage systems a key part of the Nordic energy transition?

Battery energy storage systems (BESS) continue to play a vital role in the Nordic energy transition. Based on Marsh's experience in advising BESS owners in the Nordics, cold climate challenges, ensuring safety, and optimizing spacing are key topics that are discussed for BESS development in the region.

What is a mobile energy storage system?

A mobile energy storage system is composed of a mobile vehicle, battery system and power conversion system . Relying on its spatial-temporal flexibility, it can be moved to different charging stations to exchange energy with the power system.

How is digitalisation transforming the Nordic power sector?

Digitalisation is transforming the Nordic power sector, enabling smarter, more efficient, and more resilient energy systems. Advanced digital tools are being deployed across the value chain, from generation and grid operations to market platforms and customer interfaces, enhancing transparency, automation, and responsiveness.

How much battery capacity will the Nordic countries have by 2030?

The Nordic countries are expected to have almost 1800 MW of installed battery capacity by 2030, not including batteries in electric vehicles. Figure 06.3: Expected battery capacity in the Nordics by 2030, not including batteries in electric vehicles.
