

EQACC SOLAR

North Africa Base Station solar Energy

Overview

What is the potential of solar energy in North Africa?

Hence, the resource of solar energy is rich in North Africa, and the potential is quite large to build solar power generation base in the most of North Africa region countries, such as Morocco Tunisia, Algeria, Egypt [1]. In recent years, North African economy is continued to grow steadily and energy demand is accelerated.

Why is North Africa rich in solar energy?

The North African region is rich in solar energy and is close to European continent. It is in line with the concept of the global energy interconnection to transport clean energy and electricity through transcontinental power connection. The development mode and scale of each country in North Africa are determined by economy of solar development.

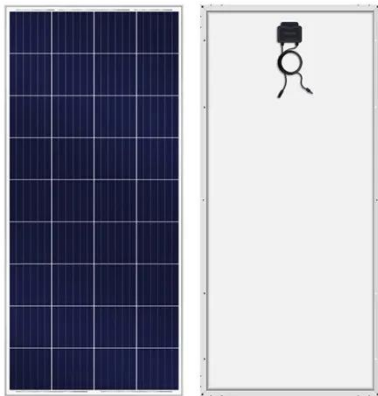

Will North Africa be a key enabler of a greener power sector?

Europe's transition to a greener power sector is gaining speed, with North Africa set to be a key enabler of this process. New capacity additions from solar and wind, weaker power demand and a partial comeback of hydropower and nuclear energy have seen Europe's power mix turn increasingly green in the recent years.

How much energy will North Africa need to support Europe?

With these three initiatives online, about 7.2 GW of interconnector capacity and 23 GW of renewable capacity will have to be deployed in North Africa to support Europe. This includes 13.5 GW of solar PV and 9.5 GW of onshore wind, requiring an investment of more than \$27.5 billion to develop these renewable projects.
