

**EQACC SOLAR**

# **North American Power Grid Wind and Solar Energy Storage Power Station**

## Overview

---

How many energy storage projects does Engie have in North America?

Today, ENGIE has 3 grid-scale energy storage projects in North America with the capacity to deliver 520 MW of power to the grid and another 2 GW under construction. These projects support the growing demand for renewable energy and enable greater reliability and resilience on power grids, while enabling the net zero energy transition.

What is grid-scale energy storage?

Grid-scale storage offers reliability and ancillary services to meet the growing demand for electricity needs. Today, ENGIE has 3 grid-scale energy storage projects in North America with the capacity to deliver 520 MW of power to the grid and another 2 GW under construction.

How much solar power does the United States have?

Installed solar capacity in the U.S. now totals about 220 GW, enough to provide over 7% of the nation's electricity. This continues a decade-long trend of rapid growth in solar power. Battery storage nearly doubled in 2024, with total installed capacity reaching almost 29 GW — and projected to grow another 47% in 2025.

What is the largest solar project in the United States?

With a planned photovoltaic capacity of 690 megawatts (MW) and battery storage of 380 MW, it is expected to be the largest solar project in the United States when fully operational. Battery storage. We also expect battery storage to set a record for annual capacity additions in 2024.
