

# North Korea's large wind and solar energy storage power station

Fire Extinguishing System

## Overview

---

The Pyongyang storage facility, operational since Q4 2024, uses lithium iron phosphate (LFP) batteries with 180MWh capacity - enough to power 60,000 homes for 3 hours during outages. Does North Korea have a wind farm?

Both wind and wave resources in North Korea have the potential to make an impact on the country's energy generation and create more consistent access to electricity. Despite this, few larger-scale wind farms—and only one tidal power station—contribute to the North's energy supply.

Does North Korea use wind and tidal power?

In the final installment of our series on North Korea's energy production, we dive into the country's use of wind and tidal power. Both wind and wave resources in North Korea have the potential to make an impact on the country's energy generation and create more consistent access to electricity.

Does North Korea have wind power?

However, as noted in previous installations of this energy series, North Korea's recent drive to bolster renewable energy capacity has primarily focused on solar and hydropower, despite its capacity for wind energy generation. North Korea's coastlines and overall mountainous terrain lend themselves relatively well to the generation of wind power.

How does North Korea regulate electricity?

North Korea has electric power transmission organizations in provinces and cities throughout the country, responsible for regulating electricity distribution and manufacturing renewable energy generators such as wind turbines, in addition to running other solar and wind installations.

## North Korea's large wind and solar energy storage power station

### North Korea's Energy Sector: Unrealized Wind ...

The following examples represent projects where both smaller and larger types of wind turbines are in use in North Korea. From ...
