# **Off-grid type energy storage container for oil refineries**

## Overview

---

What are the different types of oil storage systems?

Concrete, stone, fibreglass, steel and plastic are the most common types of material used for the construction of oil storage tanks and gas storage systems. Storage solutions in the offshore sector are meant for storing not only oil and gas, but also chemicals, intermediaries, and waste onboard offshore platforms and vessels.

What are offshore storage tanks & gas storage facilities?

Offshore storage tanks are the primary modes of storing resources recovered from offshore fields. The oil and gas are stored for either processing and further refining or transporting to customers. Some of the common oil storage tanks and gas storage facilities used include, without being restricted to:.

What is a crude & HFO storage tank?

The Crude & HFO Storage Tank from TEC Container Solutions provides high-capacity, insulated static storage for crude oil, heavy fuel oils (HFO), and other high-viscosity products. Built with a double-walled, fully bunded design, it ensures environmental protection while maintaining stable product temperatures even in harsh conditions.

What are oil and gas storage solutions?

Across the global offshore sector a range of different oil and gas storage solutions are being used. These are, as one would expect, used for storing resources extracted from offshore fields.
