# Ouagadougou Communication Green Base Station Lightning Protection Grounding

## Overview

---

What is grounding for lightning protection?

Books > Grounds for Grounding: A Hand. > Grounding for Lightning Protection Syst. The objective of lightning protection is to preclude hazards to persons, structure, or buildings and their contents attributable to the effects of lightning.

How should a lightning protection System (RBS) be formed?

The earthing network of an RBS should be formed by a ring loop surrounding the tower, equipment room and fence, at a minimum. The mean radius  $r_e$  of this ring loop should be not less than  $l_1$ , as indicated in Figure 1 and this value depends on the lightning protection system (LPS) class and on the soil resistivity.

Is a telecommunication tower impacted by lightning?

If the antenna is installed on the top of telecommunication tower, e.g., antenna positions 1 of Figure 29, it is considered to be impacted by or exposed to direct lightning strikes. Refer to [IEC 62305-3] for detail information about the protection angles and volume protected by an air termination system.

What is the objective of lightning protection?

Abstract: The objective of lightning protection is to preclude hazards to persons, structure, or buildings and their contents attributable to the effects of lightning. Protection measures to reduce physical damage depend mainly on the installation of both external lightning protection system (LPS) and internal LPS.

## Ouagadougou Communication Green Base Station Lightning Protection

---

### Communication Base Station (Independent Station) Lightning Protection

For a long time, the protection work of the communication base station (independent station) has separated the lightning protection and grounding engineering and completed it by different ...
