# **Outdoor base station network planning**

## Overview

---

The developed model was applied to search for the optimal solutions in 5G cellular network planning for an urban outdoor area in Wuhan, China. The optimal solutions and comparative experiments d.

Why are base stations important?

As critical nodes in wireless network connectivity, base stations, if not deployed with foresight and scientific planning, may not only lead to resource wastage, but also cause signal interference, directly affecting network coverage, signal quality, and user experience, thereby increasing the complexity of network management and operational costs.

How to deploy a base station in a complex network environment?

Previous research has extensively explored strategies for base station deployment using intelligent optimization algorithms. These studies employed advanced algorithms such as the sparrow algorithm, artificial immune system algorithm, and genetic algorithm, aiming to find optimal base station layouts in complex network environments.

How to optimize base station layout?

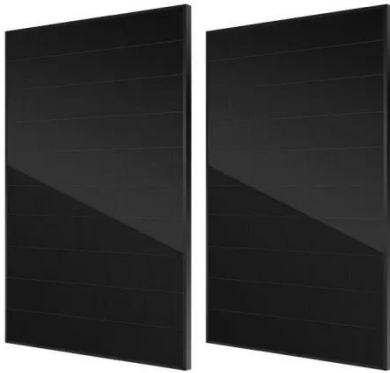

Moreover, we propose a dynamically adjusted quantum genetic algorithm (DAQGA) to optimize base station layout, with coverage and construction cost as objective functions. A signal reception strength metric is introduced to evaluate the effectiveness of the optimal layout.

How does base station coverage optimization work?

Therefore, the base station coverage optimization method proposed in this paper effectively mirrors real-world scenarios, visually exposes signal blind spots, and accurately identifies instances where users cannot connect to base stations due to complex environmental factors such as high-rise obstructions or areas beyond the coverage range. Fig. 9.

## Outdoor base station network planning

---

### Mobile Communication Network Base Station Deployment ...

This paper discusses the site optimization technology of mobile communication network, especially in the aspects of enhancing coverage and optimizing base station layout. ...

---

### Base-station network planning including environmental ...

The authors present a method for planning a base station's position in a mobile communication system taking into account both the requirement to minimise the environmental ...

### Embrace the outdoor

The simplified infrastructure and reduced complexity of outdoor base stations improve overall network efficiency and contribute to long-term cost savings. Leveraging commercial network ...

---

### Wireless Communication Base Station Location Selection ...

Abstract: Base station location selection and network optimization are critical to improving the performance of wireless communication networks in terms of latency reduction. ...
