

## EQACC SOLAR

# Pcs energy storage project

## Overview

---

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

What does PCS energy do?

Our team follows those up with support practices, such as incentive assistance programs and free energy assessments and audits. PCS Energy is a certified electrical contractor that has made it our mission to provide the most energy-efficient services in all aspects of what we do.

How many kWh can a 50 mw/100 MWh energy storage project store?

Developed and managed by Datang Hubei Energy Development, the 50MW/100MWh energy storage project can store 100,000 kWh of electricity on a single charge, supplying power to approximately 12,000 households for an entire day. In a bid to diversify from lithium, China has been exploring alternative energy storage technologies.

How did Kehua achieve a high-performance energy storage system?

As the first pioneering project to combine semi-solid state batteries with energy storage system, Kehua adopted four 1.25MW high-performance energy storage converters, which were connected in parallel to a single 5,000kVA transformer, achieving a 35kV AC grid-connected output, which ensured the high efficiency and stability of power transmission.
