

EQACC SOLAR

Personal solar power generation system in Osaka Japan

Overview

Where will solar power be installed in Japan?

Under this agreement, solar power generation systems will be installed at Kansai International Airport and Osaka International Airport. With a total capacity of approximately 23.4 MW, this will be one of the largest onsite PPAs in Japan *1. ORIX will begin supplying power to the airports in the spring of 2025.

Can solar energy be used in Japan?

To maximize the use of solar energy and overcome those drawbacks, two promising technologies have been developed: space-based solar power (SBSP) and next-generation flexible solar cells. Japan is making steady progress toward the practical implementation of both.

Why is Japan a good place to build a solar power station?

Japan also has strong enough capabilities in satellite system design to maximize power generation efficiency and accurately transmit power to the ground. Professor SHINOHARA Naoki of Kyoto University's Research Institute for Sustainable Humanosphere specializes in wireless power transmission, space solar power stations, and microwave processing.

Can Japan harness the potential of solar power?

Japan's efforts to harness the potential of solar power, a well-known renewable energy source, will shine a light on humanity's future. Japan is making steady progress toward the implementation of the groundbreaking technologies of both space-based solar power and flexible solar cells.
