

EQACC SOLAR

Power grid portable emergency power supply

Overview

What is an emergency solar generator?

Emergency solar generators are portable power systems that use solar energy to charge a built-in battery, which then supplies electricity to your devices. They're a clean, quiet, and fuel-free alternative to gas generators. A typical setup includes solar panels, a battery, and an inverter to convert stored energy into usable power.

Why do you need a portable power station?

Why Trust Us?

Portable power stations are handy for backup power during outages, off-grid electricity for an RV, or simply charging your laptop and phone while working remotely. They're effectively large bundles of rechargeable lithium-ion batteries, which provide a quiet, exhaust-free alternative to noisy gas-powered portable generators.

How many devices can a portable power station run?

So long as your portable power station has the right ports and enough capacity, it can run a massive range of devices, including phones, laptops, and desktops. Higher capacity units will also let you power large home appliances and charge electric vehicles.

What can a portable power station charge?

All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or in the UK, a kettle, you need to be able to draw thousands of watts.
