What is the difference between solar DCDB box and solar ACDB box?

Solar DCDB box distributes the DC solar power to the solar inverter. Solar ACDB box distributes the AC power converted from solar power inverter to the grid or utility. We can use Fuse, mcb and spd as the main components for extra protection. They save the inverter and the solar power system from the external surges from the Grid or natural spikes.

What is solar DCDB?

Solar DCDB - is used to protect the system if there is any fault during failure on DC side. A very crucial part of SPV system as there should be adequate protection on DC side. The DCDB incorporates isolator/Breaker to switch off the system during fault.
